VueJS Assignment

Create an Vue app with these following requirement:

User login

Create user Registration so that ONLY authorized user can login to the system.

Table : `users`

Customer profile

A client need an web app to manage their `customer profile` with some basic information like:

Table : `customers`

- Name (Required)
- Phone number (Required)
- Registration date
- Address
- Score
- Created At
- Updated At

Score update

Table : `purchases`

And everytime customer purchase their products they need to update their score points which based on the sum of all the amount for each client `1 score` = `10$` .

At this point create a menu item for user to `lookup customer` or `search by name or phone` number and then fill in the amount of money. there should be another table for this transactions call `purchases` relationship `One-to-Many` from `Customer`

- Customer-ID (Required)
- Amount (Required)
- Created At (Auto filled)

After user fill in the record in that `purchases` table then also update the **score** in table `customers` as well.

Dashboard (Home screen)

After login display a Dashboard of

1. `Number registered users` which has been reigstered in the shop.

2. `Number of customers` which has been reigstered in the shop.

3. `Number of purchases` total number of purchases in the shop.
